

# VDMConnect – Métadonnées FILM et métadonnées PACKAGE

Le but de VDMConnect est de permettre à nos clients de :

- Remplir une fiche de métadonnées (multi-territoires) pour un FILM
- Générer à partir de cette « fiche film » les métadonnées nécessaires pour un package (pour une plateforme iTunes/Amazon... et pour certains territoires)

Exemple avec le film vdmConnectId = 16127 « **The Human Centipede (First Sequence)** »

### The Human Centipede (First Sequence)

The Human Centipede

Cinema

The Human Centipede er den berygtede og kompromisløse body horror-film, som var på alles læber. Et klinisk og køligt mareridt og et grænseoverskridende gys, som blev et kultfænomen.

Da to amerikanske turister får motorstop, søger de ly i et afsidesliggende hus i et tysk landdistrikt. Der bor en pensioneret kirurg med sine helt egne planer for sin gæster: en morbid fantasi om et grotesk menneskeligt tusindben. The Human Centipede er den berygtede og kompromisløse body horror-film, som var på alles læber. Et klinisk og køligt mareridt og et grænseoverskridende gys, som blev et kultfænomen.

L'API VDMConnect (**films/{filmId} . {format}**) permet de récupérer ces métadonnées du film au format JSON

Pour notre exemple, on obtient :

```
{
  "resCode": 0,
  "film": {
    //l'id de cette fiche_film
    "id": 16127,

    // le titre original du film
    "title": "The Human Centipede (First Sequence)",

    // le provider (UMN)
    "provider": "...",

    // Le right holder ("NonStop Entertainment")
    "right_holder": "...",

    // le subtype "feature" (ou "episode" ?)
    "subtype": "feature",

    // Lab = VDM
    "lab": "...",
    "digitizing_costs_type": "Recouped",

    // Langue originale du film, Prouction companies, Copyright, Keywords
    "language": "...",

```

L'API (`packages/{packageId}.{format}`) permet ensuite de récupérer le JSON de chaque package du film.

L'id de chaque package du film (et la plateforme cible) est indiquée dans le JSON du film ci-dessus

```
// Résumé des 3 packages déjà associés à ce film
"packages": [
  {
    "id": 97929,
    "platform": {
      "id": 1,
      "name": "iTunes",
      "country_availability_field": "itunes_territory",
      "genre_availability_field": "itunes_code"
    },
    ...
  },
  ...
]
```

Cette liste de packages correspond évidemment à ce qui s'affiche dans VDMConnect quand on clique sur « Show packages »

	Amazon	Delivered
	Package ID: 16127.97931 Vendor ID: AM1512985 Created: 2025-09-25 15:40:54 Last updated: 2025-10-01 15:21:44	
	<a href="#">Edit</a>	
	Google	Delivered
	Package ID: 16127.97930 Vendor ID: GL110288 Order ID: - Created: 2025-09-25 15:40:54 Last updated: 2025-10-01 15:20:00	
	<a href="#">Edit</a>	
	iTunes	Delivered
	Package ID: 16127.97929 Vendor ID: IT702603 Created: 2025-09-25 15:40:54 Last updated: 2025-10-01 09:57:44	
	<a href="#">Edit</a>	

Dans cet exemple, le dernier de la liste est le 97929 (package iTunes pour les territoires « Denmark / Finland / Norway / Sweden »)

Pour ce package 97929, l'API renvoie le JSON ci-dessous

```
{
  "resCode": 0,
  "package": {
    "id": 97929,

    // Résumé de la fiche film (Id, Titre)
    "film": {...},

    // Plateforme de destination du package
    "platform": {
      "id": 1,
      "name": "iTunes",
      "country_availability_field": "itunes_territory",
      "genre_availability_field": "itunes_code"
    },
    "status": {
      "id": 4,
      "name": "Delivered"
    },
    "package_title": "The Human Centipede",

    // Territoire "principal" du package (iTunes impose un territoire principal). Les autres sont plus bas ("/package/territories") et au même format
    "package_territory": {
      "id": 249977,

    "production_countries": {...}
  }
}
```

Sur la base de JSON « package », PACKAGE EDITOR prend le relais l'en important, en important les artworks VDMConnect et les assets préparés dans le MAM ou par Bundle Maker et en générant le dossier à livrer (mediafiles correctement nommés et métadonnées formatées aux spécifications de la plateforme, iTunes dans ce cas)
